**CHINO VALLEY INDEPENDENT FIRE DISTRICT
STAFF REPORT**

DATE: AUGUST 17, 2022

**TO: MIKE KREEGER, BOARD PRESIDENT
ALL MEMBERS OF THE BOARD**

FROM: DAVE WILLIAMS, FIRE CHIEF

SUBJECT: FIRE STATION 68 CONSTRUCTION PROJECT OVERVIEW

PURPOSE:

Purpose is to present an update of the Fire Station 68 construction project to the Board of Directors and to provide opportunity for discussion on project size and scope.

DISCUSSION:

On May 4th, 2022 the Board of Directors was presented an overview of the Fire Station 68 project accompanied with pre-construction and construction timelines. The Board of Directors provided direction to staff to provide updates on the project and return with preliminary station floor plans and site layouts for discussion along with cost projections. Additionally, staff was asked to investigate possibly adding an additional building on the site for the storage purposes and report findings.

The intention of staff is to provide the Board of Directors with options of station sizes and corresponding projected building costs associated with each based upon industry trends and prior to going through formal request for proposal (RFP) process. Staff will provide a visual presentation with an opportunity for discussion. Staff will also provide an analysis of current and future use projections based upon possible community growth. Lastly, staff will provide optional floor plans and corresponding costs for a separate storage building for the Board's consideration.

Staff has relied upon a diverse internal design team to analyze and provide a needs assessment to PBK. Based upon the input received, PBK has developed three separate floor plans primarily differing in the size of the apparatus room and scaled accordingly in living quarters square footage. The two-bay station design as proposed amasses a total of 10,627 square feet, while the three-bay design is 11,816 square feet and the largest, four-bay design totals 13,042 square feet.

An analysis of current construction cost trends provided by PBK indicate that construction costs per square foot are approximately \$750. In an effort to project possible project costs prior to the formal

RFP process, staff has utilized cost projections and realized costs to date in the project to provide anticipated costs for each of the three designs submitted as part of this proposal.

The cost projections offered in the chart below are provided as approximate for the purposes of the board to discuss and provide direction to staff in order to commence architectural and engineering documents.
